

Foldable map

Something like this: <http://bl.ocks.org/andreaskoller/7708513> combined with this <http://oridomi.com/>

Not sure how the interface would work. Mouseover, interactive icons, drag, etc. Small to large growth, pushing other elements out of way (using bootstrap.)

```
var script = document.createElement('script');
script.type = 'text/javascript';
script.src = 'http://oridomi.com/oridomi.min.js';
document.head.appendChild(script);
```

```
var folded = new OriDomi('#map', {
  vPanels:          5,      // number of
panels when folding left or right
(vertically oriented)
  hPanels:          3,      // number of
panels when folding top or bottom
  speed:            1200,   // folding
duration in ms
  ripple:           2,      // backwards
ripple effect when animating
  shadingIntensity: .5,     // lessen the
shading effect
  perspective:      800,    // smaller
values exaggerate 3D distortion
```

```
    maxAngle:          40,    // keep the
user's folds within a range of -40 to 40
degrees
    shading:           'soft' // change the
shading type
});

folded.reveal(30);
folded.accordion(30);
folded.reveal(30, 'top');
```
